

I use Microsoft Office 97. Do I need to install a different version of the PRL Reporting Software?

Microsoft Office is not used by either [Option A](#) or [Option C](#), so you can install the current version of those programs without problems. (Option C has been replaced by Option A as of version 6.1).

[Option B](#) currently requires at least Microsoft Excel 2000. As an alternative, you can use the [Option D](#) workbooks with Office 97.

There were significant changes in the VBA Macro language used by Excel between Excel 97 and Excel 2000 (and smaller changes between Excel 2000 and Excel 2003). We are no longer able to support use of [Option B](#) with Excel 97. (It *might* work. Many of the functions *do* work, but others will produce "Compile Error" messages.)
