Some of the products we use do not have EPA Registration Numbers. How do I report them?

Not all pest control products used for pest management are registered, regulated pesticides. Some of the common examples are glue boards used for rodent control or EPA-exempt insecticides formulated entirely from natural botanical extracts. These pest control products do not have EPA Registration Numbers and do not require registration with New York State. These products do <u>not</u> need to be included in your PRL report. Other product that are sometimes mistakenly reported are fertilizers, adjuvants, surfactants and active ingredients.

Be <u>certain</u> that the product in question is exempt from reporting requirements — and that you have not just missed the EPA Registration Number on the pesticide label. If you have any questions or concerns, <u>contact</u> the NYS DEC.
