

How can I check to see if my report has been received and processed?

The [Pesticide Reporting Service Bureau](#) maintains a list of [certification IDs](#), [business registration numbers](#), and [commercial sales permit numbers](#) included on electronic reports that have been received and processed. You can search the current list on our [Report Status](#) web page.

It is possible (though rare) for an identification number to be removed from the list accessed through the Report Status page. If a company submits a list of applicators with an incorrectly entered [certification ID](#) and then later corrects the error by removing the incorrect [certification ID](#), the incorrectly reported [certification ID](#) will be on the list between the time that the original report was processed and the time of the correction.
