

Macros Disabled Warning

As the workbook is being saved, the "Macros Disabled" warning will briefly appear. This is normal and intended. [Option B](#) workbooks are saved with the red "**Macros are disabled**" warning message *visible* in order to ensure that it is visible if you re-open the workbook with [macros](#) disabled.

When an [Option B](#) workbook is opened, a [macro](#) runs that reads some identity information from the [Control Center](#) and hides the red "**Macros are disabled**" warning in the header area of the spreadsheet.
